## Audio Visual System Project Engineer

### Description

WPS | Washington Professional Systems is an iconic, family-run AV systems integration company with over 35 years of experience. Our team are experts in their fields and are constantly helping customers solve complex and challenging problems. WPS clients include Fortune 500 companies, professional sports teams, famed international performance venues, recreation and theme parks, and governments at the local, state, and federal levels. WPS is well-respected and known in the industry for producing the highest quality work, regardless of budget or project size.

WPS is growing, and we have exciting opportunities available for an Audio Visual Systems Project Engineer.

The System Project Engineer is the technical lead on a project team who will be instrumental in the determination and execution of design/build and bid system concepts, designs, and construction ready system build documents meeting customer requirements and bringing audiovisual concepts to reality.

### Responsibilities

As the System Project Engineer you will:

- Work directly with clients and internal project teams to develop budgets, timelines, construction documents, and overall management of project expectations
- Lead teams of multiple technical staff on projects
- Conceptualize system designs, and determine system requirements
- Provide technical expertise and coordinate information to support design, bidding, installation, programming, etc.
- Oversee and assist in development of the Bill of Materials (BOM) and support documentation
- Develop, and coordinate with CAD draftsman, in providing detailed CAD drawings for construction packages
- Generate functional system descriptions, complete block wiring diagrams, manage wire tagging, rack elevations, custom plate development, cable assemblies, rigging/mounting drawings, custom program GUI, etc.
- Research, identify, and recommend technology options for clients and project teams
- Oversee and reconcile the construction drawing package, support documentation, updates, and construction changes, etc. throughout the project lifecycle for coordination with trades in conjunction with CAD department.
- Support field integration staff by overseeing all on-site field engineering as necessary to complete projects, and implement final programming, system tuning, testing and commissioning protocols to ensure system functionality as necessary.
- Participate in the development and management of corporate engineering and CAD standards to ensure standards of quality for all projects working with engineering and operational staff.

### Hiring organization
